

Fix that rear brake pedal

I've done a few of these now and the first one I did was in the vice. The last two were done on the bike and it makes all the difference in the world. 🤖

I know you can just move the pedal but that didn't do enough for me, I needed mine a little higher too. 🤖

Before

After

As you can see from this picture before it made your foot hang way out to keep it off of the brake pedal. 😬

I used a pipe wrench and a big adjustable wrench and had it bent into shape in less than 5 min. and I didn't have to take anything off. 🤔 I did the same thing on the shifter too for Big Joe and his size 16's 😊

This mod is a must if you feel like your feet are slipping off of the pegs and you have a hard time with your brake peddle. 💎
